

# Eating Out Successfully

Katherine Langlois, RD, LDN

Louisiana

Blue Cross and Blue Shield of Louisiana is an independent licensee of the Blue Cross and Blue Shield Association and incorporated as Louisiana Health Service & Indemnity Company.

# Weight-loss basics

- Your weight is a balancing act, and calories are part of that equation.
- Weight loss comes down to burning more **calories** than you take in.
- Your body has a constant demand for energy and uses the calories from food to keep functioning. Energy from calories fuels your every action, from fidgeting to marathon running.
- **Carbohydrates, fats and proteins** are the types of nutrients that contain calories and are the main energy sources for your body.
- Regardless of where they come from, the calories you eat are either converted to physical energy or stored within your body as fat.

# Hypertension (HTN)

- Blood pressure is the force of blood against artery walls.
- Blood pressure rises and falls during the day. But when it stays elevated over time, then it's called **high blood pressure**.
- Lifestyle modification are essential and HTN is manageable.
- Salt increases blood pressure because it holds excess fluid in the body, which places an added burden on the heart.
- The American Heart Association recommends people eat no more than 1,500mg sodium/day.
- But since the average American's sodium intake is so excessive, even cutting back to no more than 2,400mg/day will significantly improve blood pressure.

Classification	Systolic (mmHg)	Diastolic (mmHg)
Normal	<120	<80
Prehypertension	120-139	80-89
Stage 1	140-159	90-99
Stage 2	160-179	100-109
Stage 3	≥180	≥110

# Hypertension (HTN)

- Read your food labels.
- Watch for the words "**soda**" and "**sodium**" and the symbol "**Na**" on labels, which warn you that these products contain sodium compounds.
- Look for the sodium content in milligrams and the Percent Daily Value.
  - Aim for foods that are less than 5% of the Daily Value of sodium
  - Foods with 20% or more Daily Value of sodium are considered high.

# Diabetes

- When a person has diabetes, the pancreas either cannot produce enough insulin, uses the insulin incorrectly, or both. Insulin works together with glucose (sugar) in the bloodstream to help it enter the body's cells to be burned for energy. If the insulin isn't functioning properly, glucose cannot enter the cells.
- **Type 1 diabetes**, when the body doesn't produce insulin, is usually diagnosed in children and young adults.
- **Type 2 diabetes** is the most common form of diabetes. If you have type 2 diabetes, your body does not use insulin properly.
- Carbohydrates are the main part of your food that affect how much insulin your body makes.
- Insulin is important for helping you control your weight because it affects how much fat gets burned and how much fat gets stored in your body tissues.

# Diabetes

- How much carbohydrate you eat is very individual. Finding the right amount of carbohydrate depends on many things including how active you are and what, if any, medicines you take.
- Look at the number of “**Total Carbohydrate**” grams listed on the Nutrition Facts label.
  - This tells you how many grams of carbohydrates are in one serving of that food.
  - 15 grams total carbohydrate = 1 serving size
  - There can be more than one serving size in the package.

**Ingredients:** Dried Potatoes, Corn Starch, Corn Oil, Sugar, Salt, Soy Lecithin, Dextrose, and Annatto Extract (Color).  
**CONTAINS A SOY INGREDIENT.**

# High Cholesterol

- Cholesterol is a waxy substance that comes from two sources: **your body and food.**
- Excess cholesterol can form plaque between layers of artery walls, making it harder for your heart to circulate blood, and can lead to a stroke or a heart attack.
- Making healthy eating choices and increasing exercise are important first steps in improving your cholesterol.

# High Cholesterol

- The American Heart Association's Nutrition Committee strongly advises these **fat guidelines** for healthy Americans over age 2:
  - Eat between 25 and 35% of your total daily calories as fats from foods like fish, nuts, and vegetable oils.
  - Limit the amount of saturated fats you eat to less than 7% of your total daily calories. That means if you need about 2,000 calories a day, less than 140 calories (or 16 grams) should come from saturated fats.
  - Limit the amount of trans fats to less than 1% of your total daily calories. That means if you need about 2,000 calories a day, less than 20 calories (or 2 grams) should come from trans fats.
  - For good health, the majority of fats you eat should be monounsaturated or polyunsaturated.

# Tips for Eating Out

Instead of . . .	Try. . .
Cream soup	Low-sodium broth-based soups
Fried chicken sandwich	Grilled chicken sandwich
French fries	Baked potato; baked fries
Creamy coleslaw	Vegetables or tossed salad
Potato chips	Unsalted pretzels; baked potato chips
Danish; muffin	English muffin; toast; oatmeal
Caesar salad	Green salad with low-fat or non-creamy dressing
Fried rice	Steamed brown rice
Pasta with butter or cream sauces, such as Alfredo	Pasta with marsala or marinara sauce
Full-fat sour cream and cheese	Salsa, Pico de Gallo, cilantro

# Healthy Eating Without Much Time

- Serve no-cook breakfasts.
  - Try oatmeal with 1 serving of fruit, or peanut butter with an apple.
  - Make a smoothie with yogurt, frozen or fresh fruit, and protein powder.
  - Boil a few eggs one evening to have throughout the week, then add toast or an English muffin for a carbohydrate.
- Healthy meals can be quick and easy.
  - Use prewashed veggies and salad greens.
  - Use frozen fruit and vegetables.
  - Use minute rice or frozen quinoa.

# Healthy Eating Without Much Time

- Cook in large batches when pressed for time
  - Make a large pot of soup or chili and serve with a vegetable.
  - Double recipes and freeze extra for other meals.
  - Crock pot meals – when you get home, dinner is waiting!
- Start with precooked basics
  - Get store-bought rotisserie chicken, turkey meatballs, frozen fish
  - Add a salad or vegetable.
  - Add a small serving of carbohydrates, such as minute rice or frozen corn. Then dinner is served!

# Healthy Eating When You Don't Have Time

- Ways to eat healthy at work.
  - Pack leftovers the night before.
  - Wash fruit and/or vegetables at home so they are ready to eat.
  - Bring nonperishable snacks to have in your desk, such as nuts or protein bars, so you can avoid the vending machine.
  - Keep a refillable cup at work.

# calories

(noun)

Tiny creatures that live in your closet and sew your clothes a little bit tighter every night.
